### 5.11.2 Member Function Documentation

#### 5.11.2.1 AssistAim() [1/2]

```
float Agoston_R.Aim_Assist_Pro.Scripts.AimAssistCode.PrecisionAim.PrecisionAim.AssistAim (
    float input )
```

Overload for the other method, used in cases when there's only one axis for the look input.

#### Parameters

<i>input</i>	the precision aim input, which contains the look input
--------------	--

#### Returns

the modified look input

#### 5.11.2.2 AssistAim() [2/2]

```
Vector2 Agoston_R.Aim_Assist_Pro.Scripts.AimAssistCode.PrecisionAim.PrecisionAim.AssistAim (
    Vector2 input )
```

Calculates the slowed down player input delta using the curve.

Receives a look input delta, returns a modified look input delta.

Before calculating your rotations from the player input, run that input through this.

## Parameters

<i>input</i>	inputs: the player's look input delta
--------------	---------------------------------------

## Returns

the modified look input delta

## 5.11.2.3 Awake()

```
override void Agoston_R.Aim_Assist_Pro.Scripts.AimAssistCode.PrecisionAim.PrecisionAim.Awake (
